Fusion Technologies Opens Salt Lake City Office

Salt Lake City, UT--Fusion Technologies™, a worldwide provider of commercial software development and quality assurance services since 1994 to independent software vendors and large corporate clients, recently announced the opening of its newest office in Salt Lake City. Fusion now has 10 offices across the U.S. and Europe, as well as two offshore development centers in the high-tech cities of Hyderabad and Bangalore, India.

According to Mike Baranack, Senior Business Development Executive in Utah, “We are very excited about the opening of our Salt City Office. This area is one of the most dynamic software development regions in the U.S. and is a logical location for Fusion.”

Fusion was an early adopter of delivering open source-based solutions to its clients and has extensive expertise in more than 50 open source technologies including popular platforms such as the JBoss middleware stack JEMS, Jasper Reports/Jasper Decisions and Enterprise Database. In addition to open source implementations, Fusion offers a broad range of expertise in developing applications using Java 2 Enterprise Edition, Microsoft .NET and C++.

Fusion’s Quality Assurance services are comprehensive in nature and range from providing manual testing services to creating automated testing frameworks and suites to providing Tier 2 level technical support.

Fusion’s project execution methodology calls for having local architects, designers and project managers onsite at client locations. These onsite teams are paired with offshore development teams from Hyderabad and Bangalore, providing a high degree of client accountability while providing the cost and time benefits associated with global delivery.

As explained by Matt Brown, Managing Director for the West Area Region, “We help software product companies get their products to market quicker, with more features, fewer defects and without increasing the headcount of the existing development organization. Our delivery model has been globally certified by Carnegie Mellon’s Software Engineering Institute (SEI) and we have optimized our processes to support modern Agile development methodologies such as SCRUM or Extreme Programming.”

Fusion is a dynamic, rapidly growing firm with headquarters in Edison, New Jersey, and offices in New York, Boston, Philadelphia, Charlotte, Houston, Austin, Phoenix, Salt Lake City, London, and facilities in India at Hyderabad and Bangalore.
